

Create Washy Washy Soap

Supplies

Dish Soap

Baking Soda

White or Cider Vinegar

Resealable sandwich-sized
plastic bag

Measuring spoons

Instructions:

- 1 Open your plastic bag and put 2 tablespoons of dish soap inside.
- 2 Add 1 teaspoon of baking soda to the soap and seal your bag.
- 3 Use your fingers to mix the baking soda and soap together thoroughly.
- 4 Open the bag and add 1 tablespoon of vinegar.
- 5 Reseal your bag and mix the contents again. Your bag should now inflate as the vinegar and baking soda combine to create carbon dioxide!
- 6 Open your bag before it over inflates and allow some carbon dioxide to escape before the bag over inflates. Once the reaction settles down, reseal the bag.
- 7 When you're ready to use your soap simply snip off a corner of the bag and squeeze the mixture onto the palms of your hands!
- 8 Wet your hands and lather with soap for at least twenty seconds, being sure to scrub your nails, in between your fingers and the backs of your hands!

**Recommended for ages 6+*
